

ACCESSORIES

Top Fill

- Ergonomic
- Space saving
- Flexible

This system is ideal if you want to save space around your packaging stations.

The MINI PAK'R stands on a high platform, providing the air cushions directly into the bin, without using ducting.

This system also contributes ergonomically by improving the posture of your employees, which leads to less injuries.

Benefits

Ergonomic

Given that there is no longer any requirement for ducting, the packers do not suffer from noise pollution from the blower or wind in the neck. The well-being of the packers is significantly improved, which eventually produces a higher output.

Space Saving

The Top Fill can be placed directly against the wall, or positioned over the packing table or conveyor, which does not take up workspace.

Flexible Solution

The silo of the Top Fill has several openings that can be used simultaneously by multiple users.

Characteristics

- Robust and stable, perfect for a logistic environment
- Ergonomic and flexible
- Sensor-controlled production
- Multiple openings for multiple users

Specifications Small Bin

Dimensions

- **Small Bin (LxHxW):** 580x780x1050 mm
- **Small Frame (LxHxW):** 580x580x1700 mm (height to be optimised on site)

The **Top Fill** can be placed directly above the conveyor, saving valuable workspace.

As a custom-made option, the **Top Fill** can also be provided with a company logo.

Machines

The MINI PAK'R Industrial is specially designed for areas where space is critical. It's a welcome addition to warehouses and distribution centres with multiple packing tables.

The MINI PAK'R V3 has a new seal technology that ensures even higher reliability and lower maintenance. Also, the machine is suitable for a wider range of films including our new sustainable film.
